
TMSA Rainbow Capillary Thermometer

Description

Liquid-Expanding Non-power Thermometer

Operation

As a non-powered thermometer, it indicates the temperature based on the liquid's expansion coefficient, allowing you to check the temperature without electrical equipment by installing a sensor in your desired location.

Application

Temperature ranges from -40°C to 120°C with this product.

The low-temperature applications are for a freezer, freezing warehouse, agricultural greenhouse, and icehouse.

High-temperature applications are for a water heater, boiler, sauna, and so forth.
