Thermal Fuses

Description

Description

Thermal cut-offs/thermal-fuses are available in a range of temperatures and electrical ratings to meet your application requirements.

Rated for continuous operating currents up to 10amps at 250 VAC (15 amps at 120 VAC) is the industry standard for over temperature protection. A high current varient exists, it is rated for operating currents up to 16 amps at 250 VAC (25 amps at 120VAC). Similar in appearance to the lower current version, this Series has a different internal construction capable of interrupting higher currents.

Features:

- Small physical size,ensures fast response to overtemperature
- 10A and 16A 250Vac rated
- Thermal element protected mechanically and against oxidization
- Single shot. Non resettable
- Accurate melting points,range from 72°C to 240°C
- Long term stability
